

A biodegradable and compostable loose fill product, made from non-food renewable materials, that combines performance and efficiency at a competitive price.

Performance

PakNatural™ material is anti-static and provides cushioning protection equal to EPS. Independent tests demonstrate superior performance in keeping products from migrating inside the container during the distribution cycle. PakNatural™ Loose Fill also offers low dust generation.

Efficiency

With performance superior to starch based products in resisting settling, PakNatural™ material offers superior void fill efficiency. Additionally, PakNatural™ Loose Fill reduces storage issues, as it has shown better humidity resistance than starch.

Verification

A number of international certification organizations have certified PakNatural™ Loose Fill as a biodegradable and compostable material, including Biodegradable Products Institute (BPI) certification under the organization's American Society for Testing and Materials (ASTM) ASTM D6400 test for compostability, German certification organization DIN CERTCO and Belgium-based Vincotte, under the European test EN 13432.*
